

COVID-19 safety rules for CMIF

- ✓ Wear your face covering when entering CMIF. You need to provide your own.
- ✓ Leave bags in the main entrance room (4115), wash your hands (soap and towels provided, as well as hand sanitizer and gloves) and proceed to your work area.
- ✓ Clean your work area for sample prep with 70% ethanol and Kimwipe tissues or paper towels. Use gloves for the cleaning process to protect your skin.
- ✓ Proceed to the microscope room. Put 70% ethanol on a kimwipe or microfiber cloth and wipe down all frequently touched surfaces on the workstation you are using (keyboard, mouse, touchpad, knobs, eyepieces, joystick etc.). Most of these surfaces are covered with clear film and we keep a record in the logbook when the surfaces were last covered. When in doubt please cover them with fresh cling film (provided in the lab area) and note it in the logbook.
- ✓ Before you leave please sanitize all surfaces you touched. We will periodically sanitize all frequently touched areas in CMIF.
- ✓ We leave 30min time gaps between users. Please do your best to vacate the workstation when your time slot is over.
