Project Series.

Busting the Myths About Genetically Engineered Foods

Are current engineered foods safe and beneficial? Are they being used in a sustainable manner? Can they coexist with organic crops? This talk will cut through the rhetoric espoused by proponents and opponents of GE Crops and provide the facts surrounding the GE crops grown in the US. While answering each of those questions, Greg Jaffe will bring the Center for Science in the Public Interest's unique science-based consumer perspective to this topic in a way that is both informative and relevant to both academics at NC State as well as everyday consumers.
