## Genetic engineering is at an important crossroads.

The first generation of researchers and regulators are in many cases still actively working. The clock is ticking to capture the memories and papers of these pioneering practitioners while they are still willing and able to share.

### Our Goals:

To provide **public access** to the history of genetic engineering's ideas, practice and impact via longer-form video interviews.

To create and preserve an **archive** of high-quality oral histories with key figures in the field.

### Our Questions:

How do you define your field?

Why did you think this technology mattered?

What were the key questions for you?

What roads did you not take? Any regrets?

What are your greatest concerns for the future of this technology?

### Principal Investigator:

Dr. Jennifer Kuzma, Goodnight-NC GSK Foundation Distinguished Professor and GES Center Co-Director, [jkuzma@ncsu.edu](mailto:jkuzma@ncsu.edu)
